

## Are you aware?

There is a proposal for a battery energy storage site in Coleby

### What size is it?

35 hectares, which is 86.5 acres - 5 acres is almost the size of 4 football pitches

### How does battery energy storage work?

There are lithium-ion batteries, situated in containers that are similar to those used for shipping/lorries. There is also electrical infrastructure to connect these to the pylons, a sub-station, so that high voltage electricity can be taken and added back to the Grid.

### When are the Consultation Events?

Coleby Village Hall on 13<sup>th</sup> March 11.00am to 3.00pm

Navenby, The Venue on 14<sup>th</sup> March 3.00pm to 7.00pm

**Please attend** one of these events to ask questions and find out what is being proposed.

**It is important** that you provide feedback, so there will be

**A public meeting** before the closing date of the consultation, so that you can come along and ask questions and listen to what other residents and parish councillors have found out.

We will let you know as soon as possible the date of this meeting.

This leaflet has been sent by Coleby Parish Council and distributed by residents
